

STATE BUILDING BOARD 2019

Five-Year Building Program

INTRODUCTION

The Utah State Building Board, Department of Administrative Services (DAS), and the Division of Facilities Construction and Management (DFCM) are pleased to present the Five-Year Building Program for the 2019 legislative session. This report is the culmination over many months of collaboration and thoughtful analysis by the Building Board, DFCM, State agencies, and institutions.

The Utah State Building Board would like to acknowledge all who have assisted in this publication. While we cannot thank each contributor individually, we recognize many have put forward considerable efforts.

Department of Administrative Services

Tani Pack Downing, Executive Director
Ken Hansen, Deputy Executive Director
Marilee Richins, Deputy Executive Director
Patricia Yacks, State Building Board Business Analyst

Division of Facilities Construction & Management

Jim Russell, Director
Cee Cee Niederhauser, Administrative Assistant
Darrell Hunting, Project Management Supervisor
Lee Fairbourn, Real Estate Manager
David Williams, Financial Manager
Project Management Staff

Other Contributors

Rich Amon, Assistant Commissioner, Utah System of Higher Education
Michael Bouwhuis, Acting Commissioner, Utah System of Technical Colleges
State Agencies and Higher Education Institutions

CONTENTS

- 03 Building Board Responsibilities:**
Describes the processes and Evaluation Guide used by the Board to rank and prioritize capital development projects submitted by State agencies and higher education institutions.
- 12 State-Funded Projects:**
Summaries, in order of priority, for each of the capital development and land bank projects ranked by the Building Board. The Board's prioritization reflects the most urgent building needs in the state.
- 30 Other Funded Projects:**
Summaries of projects submitted that has a funding source other than legislative appropriation.
- 42 Five-Year Plan:**
A recommended list of capital development projects to be considered for funding over the next five years.
- 43 Capital Improvement Projects:**
Capital improvement projects (repairs to existing buildings and/or infrastructure) submitted by State agencies and higher education institutions.
- 59 DFCM Lease Report:**
Building and land leases that DFCM manages for State agencies. This report also includes projections for leasing needs and rent costs for the upcoming fiscal year.
- 66 Capital Facilities Funding History & Contingency & Project Reserve**
DFCM's transactions for the Contingency and Project Reserve Accounts.

BUILDING BOARD RESPONSIBILITIES

The Building Board, under Title 63A Chapter 05, is responsible for ensuring that the capital facility programs for the State of Utah are efficiently managed and effectively implemented. The Building Board cooperates with state institutions, departments, commissions, and agencies in meeting this mandate to provide quality facilities in a timely and cost effective manner. The powers and duties of the Building Board include the following:

- Recommending a Five-Year Building Plan that accurately reflects present and future State building needs
- Allocating appropriations for capital improvements to specific projects
- Approving the construction of certain higher-education facilities that are funded entirely with Non-State funds
- Establishing design criteria, standards, and procedures for new construction or remodeling projects
- Establishing operations and maintenance standards for State facilities
- Adopting rules consistent with the State Procurement Code to govern the procurement of architect/engineer services, construction, and leased space by DFCM
- Adopting other rules necessary for the effective performance of the Building Board and DFCM
- Reviewing and approving State agency and institutional master plans
- Approving long-term facility leases
- Recommending statutory changes to the Governor and Legislature that are necessary to ensure an effective, well-coordinated building program

As required by statute, the Five-Year Plan includes a priority list of capital development requests with additional detail provided for each project in the first two years . This detail is provided in the summary of each of these projects. This summary also includes: a cost estimate, projected increase in O&M (operation and maintenance), and the staffing/ program costs that will result if the project is funded.

BUILDING BOARD MEMBERS

The Utah State Building Board is comprised of eight members, seven of which are private citizens appointed by the Governor. The eighth member is the Director of the Governor's Office of Management and Budget, and serves as the ex-officio representative of the Governor.

Director

MICHAEL SMITH
Facilities Auditor

DFCM RESPONSIBILITIES

DFCM works closely with the Building Board to meeting the facility needs of agencies and institutions. DFCM's primary responsibilities include: construction management, facilities management, real estate, and energy management.

CONSTRUCTION

DFCM provides technical support to aid the Building Board in making recommendations for capital development projects and allocating capital improvement funds to projects. This support includes an analysis of the requested projects, validation of the project scope, and determination of the project budget. Each request is developed in consideration of the mission and growth needs of the agency or institution. DFCM also oversees the development of facility master plans and architectural programs.

DFCM is responsible for administering the design and construction of all State projects costing more than \$100,000, unless the Building Board has delegated this responsibility to the user. DFCM is charged with providing projects on time and within budget so that agencies and institutions can meet their obligations to the citizens of the State of Utah.

FACILITIES MANAGEMENT

DFCM provides facilities management services for several buildings throughout the state. Services include building maintenance and safety, providing tenant comfort, procuring ongoing service contracts (such as janitorial and security), conducting small-scale construction or remodel projects, emergency preparedness, and actively pursuing strategies to reduce energy consumption and utility costs.

REAL ESTATE

DFCM leases real property for all State agencies and institutions, except the Office of the Courts and higher education. The leasing process includes: evaluating space requests, developing requests for proposals, and negotiating lease agreements. DFCM manages leased space to ensure that contractual obligations are met, acquires and disposes of real property for most State agencies, and resolves problems that arise between landlords and tenant agencies. DFCM acquires land for State agency facilities after approved funding is received.

BUILDING PERFORMANCE GROUP

The Building Performance Group provides management for the High Performance Building Program and the State Building Energy Efficiency Program. Both of these programs are geared toward achieving best value from our State building assets by ensuring life cycle cost effective and efficient new construction design choices and long term optimized operations in the State's existing building stock. The group directly manages capital improvement projects and the high performance process for new construction, as well as providing internal and external consultation services to State agencies in the area of high performing buildings.

CAPITAL DEVELOPMENT RECOMMENDATIONS

The State Building Board has the statutory responsibility to develop and maintain a five-year plan for State facility needs. This comprehensive plan addresses the needs of State agencies and institutions of higher education. The plan also includes capital development projects that are defined by statute as:

- a) a new facility with a construction cost of \$500,000 or more;
- b) remodeling, site, or utility project with a total cost of \$3,500,000; or
- c) purchase of real property where an appropriation is requested to fund the purchase.

STATE-FUNDED PROJECTS

State-funded projects include projects requesting general State funds. These projects compete for priority on the Board's Five-Year Building Plan.

PROJECTS FROM OTHER FUNDING SOURCES

Projects from other funding sources are funded entirely by restricted State funds that cannot be appropriated for general State purposes, and from non-State funds; such as donations and federal grants. Projects in this category are considered by the Board for a determination as to whether they should be recommended for approval by the Legislature. These projects are not prioritized.

EVALUATION AND PRIORITIZATION

The Board, with the assistance of DFCM, undertakes a comprehensive and objective evaluation of the State's capital facility needs. In an effort to improve its process, the Board developed an evaluation guide to aid the prioritization of current recommendations for State-Funded Requests.

This guide was developed in a public process that solicited input from several State officials. Strategic objectives were selected to determine how each project met state facility needs. The importance of each objective was then weighted and scoring anchors were identified. The adopted evaluation guide, along with additional information of each objective, is located on the next page.

Each Board member provided a complete scoring of each State-funded request being considered. These scores were then tabulated to arrive at a ranking that became the basis of the Board's recommended priority list. In the result of a tie, the Board determined which request was given priority. The Board retains the option of altering the priority order that results from this process.

Prior to arriving at its recommendations, the Board underwent an extensive process to understand the facility needs of the State. The Board has toured a majority of the facilities and considered the circumstances associated with the projects on the priority list. Each State agency and institution was asked to submit a written request which included a description of the project and perform a self-evaluation on how their request addressed each of the objectives.

EVALUATION GUIDE

OBJECTIVES	EVALUATION CRITERIA	WT*	SCORING ANCHORS
#1 The project eliminates life safety and other deficiencies in existing buildings (or infrastructure) through renewal and/or replacement.	The Building Board and DFCM will document whether the project eliminates identified code and life safety deficiencies including the potential impact and probability of occurrence. DFCM will provide the Board with a recommended score for this objective.	4	5 = Deficiencies in existing building exceed 85% of replacement cost or a substantial threat to life and property exists based on degree of threat/probability of occurrence. 3 = Deficiencies in existing building are 45% to 65% of replacement cost or a moderate threat to life and property exists based on degree of threat/probability of occurrence. 1 = Deficiencies in existing building are less than 25% of replacement cost or a low threat to life and property exists based on degree of threat/probability of occurrence. 0 = Project does not address an existing facility.
#2 Address essential program growth, space utilization, and capacity requirements	Degree the request is driven by verified growth and space shortages. Is the request justified by demographics? Regents Office will provide recommended score for Higher Ed projects based on "Q" analysis.	4	5 = Project is driven by documented substantial program space shortage and the requested space is supported by demographic data for existing demand plus a reasonable allowance for future growth. 3 = Project is driven by documented moderate program space shortage and the requested space is supported by demographic data for existing demand and growth. 0 = Project is not supported by demographic data or project is under size supported by demographic data.
Combined Objectives #1 & #2.	For projects involving both an increase in space and the renovation or replacement of existing space, the scores for objectives #1 & #2 are combined and each score is reduced by the proportionate percentage associated with the existing facility or increase in new space.		
#3 Cost effective solutions. All Projects with a standard design and construction approach appropriate for the facility need should receive a score of 3.	Only projects with a less costly design/construction approach or bargain opportunity should receive scores higher than 3 and only projects with more costly design/construction should less than 3.	1	5 = Project has an alternative design or construction approach that is substantially less costly than the standard design/construction or represents a bargain opportunity. 3 = Project has a cost effective design/construction approach appropriate to the facility. 0 = Project has a design/construction approach more costly than is appropriate.
#4 Improve program effectiveness and provide facilities necessary to support critical programs and initiatives.	To what degree does the project improve program effectiveness or support a critical state program or initiative other than the simple addition of space?	2	5 = Project substantially improves the program effectiveness and/or support of critical program or initiative 3 = Project moderately improves the program effectiveness and/or support of critical program or initiative 1 = Project minimally improves the program effectiveness and/or support of critical program or initiative
#5 Takes advantage of alternative funding opportunities.	What portion of the total project cost is covered by alternative funds? Has an endowment been established for O&M?	1	5 = Alternative funding for the project is more than 60% of the total cost or alternative funding is significant and has established a significant endowment for ongoing O&M. 3 = Alternative funding for the project is a considerable portion of the total cost or alternative funding has established a moderate endowment for ongoing O&M. 1 = No alternative funding is available for this program.

*Weight

EVALUATION GUIDE OBJECTIVES

The following information is provided to aid in the application of the Evaluation Guide. These strategic objectives were identified by the Building Board as having an impact on facility needs. A project's score is determined by multiplying the score for each objective by the applicable weighting factor. These figures are then added together to arrive at the total score. Clarification on how each objective should be scored is provided below.

OBJECTIVE ONE ADDRESS LIFE SAFETY AND OTHER DEFICIENCIES IN EXISTING ASSETS THROUGH RENEWAL OR REPLACEMENT

This objective measures the degree to which a project eliminates deficiencies in existing State-owned facilities by utilizing information obtained through the Board's facility assessment program. DFCM may also use additional information from engineering studies or rely on the guidance of other professionals to develop a score for this objective. This measurement is calculated by dividing the cost of correcting deficiencies by the portion of the total project budget that relates to the existing facility. The only deficiencies considered in this calculation are those that will be resolved directly through the requested project. This objective addresses basic deficiencies in the building and its systems. The cost of correcting programmatic deficiencies is not considered in this objective but is addressed in Objective 4.

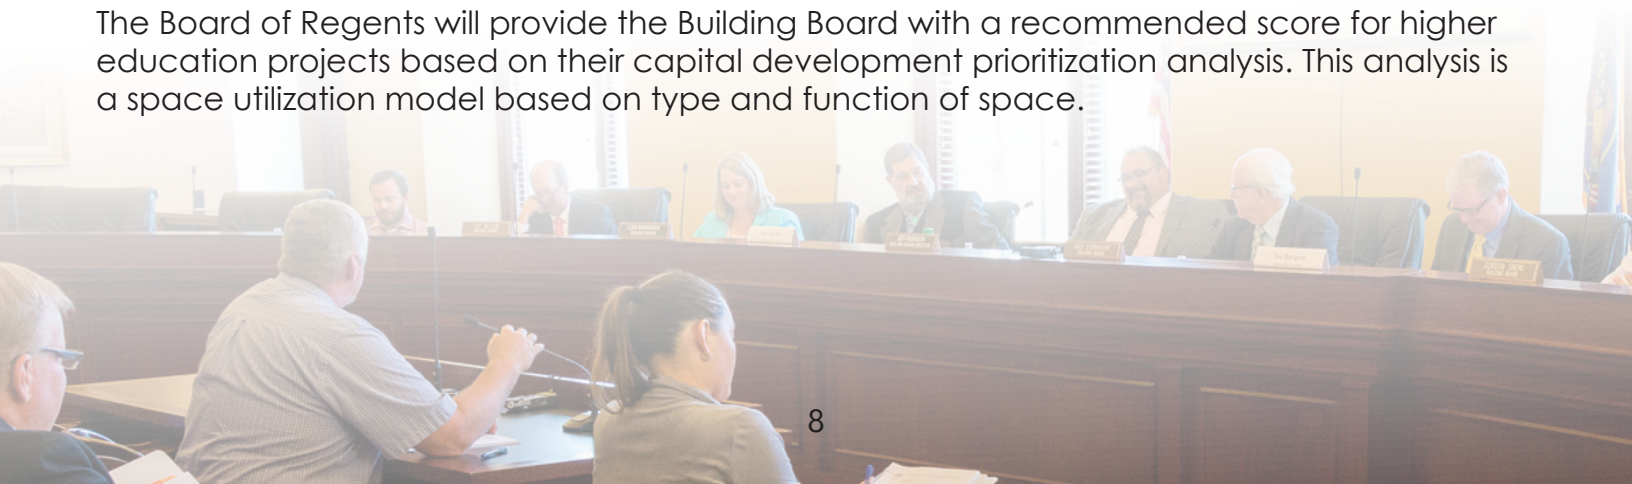

An example of a programmatic deficiency is a space reconfiguration that is desired to improve space utilization or program effectiveness. Additional points may be awarded based on the potential impact of life safety deficiencies and their probability of occurrence as noted in the scoring anchors. If the project addresses both existing space as well as an increase in space, the score resulting from this objective will be adjusted per the Combined Objectives 1 and 2 Scoring Adjustment process.

OBJECTIVE TWO ADDRESS ESSENTIAL PROGRAM SPACE REQUIREMENTS

This objective evaluates the degree to which the requested increase in State-owned space is driven by documented growth and shortage of space, as well as the degree to which the amount of requested space is supported by demographic information. Due to the wide variety of requests submitted, it is anticipated that the requesting agency, or institution, will identify the most appropriate demographic data to support its request.

When developing the suggested score, the Board may obtain and consider additional demographic data beyond what is submitted with the request. If the project addresses both existing space as well as an increase in space, the score resulting from this objective will be adjusted per the Combined Objectives 1 and 2 Scoring Adjustment process.

The Board of Regents will provide the Building Board with a recommended score for higher education projects based on their capital development prioritization analysis. This analysis is a space utilization model based on type and function of space.

EVALUATION GUIDE OBJECTIVES

COMBINED OBJECTIVES ONE AND TWO SCORING ADJUSTMENT

For projects that involve both an increase in space and the renovation or replacement of existing State-owned space, the scores for objectives 1 and 2 must be reduced by the same proportion as the project cost associated with the existing facility or the increase in space, as applicable, is to the total project cost.

The following example is provided to demonstrate this calculation:

Assume that 80% of a requested project replaces an existing facility and 20% of the project creates an increase in space beyond that contained in an existing facility. Assume further that substantial problems are documented in the existing building that is being replaced that are sufficient to justify a score of 5. This score would then be reduced to a final score of 4 through the following calculation: $5 * 0.8 = 4$. Assume also that the criteria for Objective 2 justify a score of 5. This score would then be reduced to a final score of 1 through the following calculation: $5 * 0.2 = 1$. The Total Combined Score for Objectives 1 and 2 would equal 5.

OBJECTIVE THREE COST EFFECTIVE SOLUTIONS

This objective measures the cost effectiveness of the request. It is expected that most projects will receive a score of 3. Solutions will be evaluated to assure validity.

OBJECTIVE FOUR IMPROVE PROGRAM EFFECTIVENESS/CAPACITY AND PROVIDE FACILITIES NECESSARY TO SUPPORT CRITICAL PROGRAMS AND INITIATIVES

This objective addresses the degree to which a project improves the effectiveness or capacity of a program. Capacity increases will be evaluated based on quantity of service that can be provided in a given amount of space. Capacity increases that are only the result of an increase in space will not be considered. This objective also measures the degree to which a request supports critical programs or initiatives. However, this objective does not address the level of support gained for a specific project. The scoring anchors address the criticality of the program or initiative and the degree to which the project is required in order for that program or initiative to operate.

OBJECTIVE FIVE TAKES ADVANTAGE OF ALTERNATIVE FUNDING OPPORTUNITIES FOR NEEDED FACILITIES

This objective addresses the degree to which alternative funding reduces the funding impact on the State.

ELEMENTS OF THE COST ESTIMATE

Each capital development project contains a cost estimate. Elements of the cost estimate include the following:

TOTAL REQUEST FY20 The amount of State funds requested. This amount is calculated by deducting "Previous (or Future) Funding" and "Other Funding" from the "Total Estimated Cost."

CONSTRUCTION This includes all construction costs for the facility and its site as well as equipment built into the facility and abatement of any hazardous materials.

DESIGN FEES This includes all costs associated with the design of the project including programming and special consultant fees and travel for the design team.

PROPERTY PURCHASE This includes all costs associated with the acquisition of real property.

FURNISHINGS & EQUIPMENT This includes furnishings, movable equipment, security equipment, and IT equipment.

UTAH ARTS As provided by statute, this amount is set at 1% of the construction budget. The decision of whether to fund this item is up to the Legislature.

OTHER Costs in the Other section include the following:

Testing and Inspection These services are required by law to provide quality assurance.

Commissioning This is a third-party service that validates the performance of building systems before a facility is turned over to the user.

Contingency The amount budgeted for contingency is based on a sliding scale that is set by statute.

Legal Services Legal services provided by the Attorney General's staff.

Moving/Occupancy This is the cost for the user to move and occupy the space.

TOTAL ESTIMATED COST The total estimated cost of the complete project.

PREVIOUS FUNDING State funds that were previously appropriated for the project.

OTHER FUNDING Funds from sources other than the general funds of the State. This includes donations, revenue bonds issued by others, restricted funds, and federal funds.

INCREASED STATE O&M The amount of increase in State funds requested by the agency or institution for operations and maintenance costs associated with the project. It includes utilities, cleaning, salaries of maintenance personnel, landscape maintenance, snow removal, repairs, and maintenance supplies. The Building Board and the Board of Regents have adopted a model which provides a uniform approach for determining the amount of maintenance funding for higher education projects.

ELEMENTS OF THE COST ESTIMATE

For projects that are proposed to be funded through a lease revenue bond or a lease/purchase this item was modified to indicate the amount by which the estimated annual cost of debt service and O&M exceeds the current budget for lease payments (including O&M).

TOTAL COST OF OWNERSHIP (TCO) This is the dollar per square foot value (\$/sqft) associated with a facility. TCO is a calculation of all facility specific costs (not including furnishings or non-facility specific equipment) divided by the estimated lifespan of the building (30-50 years), and the total gross area. Facility specific costs include all construction, preservation, maintenance, and operations costs. Note that land values are specifically excluded.

REQUEST TYPE Funding requests for facilities include: Design and Construction, Programming, Purchase, Lease/Purchase, and Purchase and Remodel.

CONSTRUCTION COST PER SQUARE FEET This is calculated by dividing the construction cost by the number of square feet in the project. This is a useful tool in comparing the costs of various projects on a square foot basis.

NEW FTE REQUIRED The number of additional full time equivalent employees that will be required when the project is completed. This includes staffing for programmatic purposes, operations, and maintenance.

ADDITIONAL PROGRAM COSTS The costs, as provided by the agency or institution, of a new program or the expansion of an existing program associated with the project request.

PROGRAMMING This indicates the current status of the architectural program for the project.

SYSTEMS REPLACEMENT As required by statute, this is the estimated future cost of replacing the systems in the building.

ESTIMATED LIFE SPAN As required by statute, this is the estimated life expectancy of the facility resulting from the project.

Note: Utility connection fees are included, while impact fees are not, in the project budget based on the section of the Utah Code pertaining to impact fees and past Capital Development project budgets approved by the Legislature.

PROJECT OVERVIEW

The new Readiness Center will provide required space for training, storage, and administrative space required for National Guard troops to train and store their vast inventory of equipment and supplies. This facility will also act as a community center for disasters and emergencies, allowing the Guard to respond to domestic emergencies and national defense. The facility will be strategically located next to an airport, rail system, and interstate system, which is key during domestic and national emergencies, deployments, and in support of State of Utah. A 25% State share of the project cost is required for the National Guard to accept the Federal funds approved through Congress for the project.

Utah Department of Agriculture and Food William Spry Agriculture Building Replacement

FY20 Request \$28,354,638

PROJECT OVERVIEW

The site for a new William Spry Agriculture Building will be located just west of the current Agriculture Building at 350 N. Redwood Rd. in Salt Lake City. The area is within the State's organization of office facilities called the Redwood Road Complex. The agency requires a physical space that must accommodate the diversity of people who perform tasks ranging from lab environments and private offices to public-interfacing space. The existing facility was not designed to recognize this range of needs, nor is it keeping pace with the needs it was designed to serve.

PROJECT OVERVIEW

Dixie State is in need of a new science building. Currently, the lab capacity in the building, especially for Anatomy and Physiology, is inadequate. A primary priority of the institution is to facilitate growth in the sciences and health sciences. The new Science Building is an important missing piece to increase the number of graduates needed to meet critical workforce needs. The proposal is to build a modern science facility in an optimal location by demolishing two old buildings, the Education building and Music building. The project also includes replacing an existing building with additional surface parking.

Weber State University

Norda Engineering and
Applied Science Building

FY20 Request \$45,900,883

PROJECT OVERVIEW

Weber State University is requesting to replace the existing Technical Education Building on the Ogden Campus with a new Engineering and Computer Science facility. This project will provide adequate academic facilities including classrooms, laboratories, offices, study spaces, and workrooms to support the rapidly expanding Electrical and Computer Engineering programs in the Engineering, Applied Science and Technology College. This facility will also support students enrolled in computer science programs and engineering technology programs. Also housed in this facility will be the IT Data Center, NUAMES High School, and a student gathering space.

PROJECT OVERVIEW

Business programs are one of the fastest growing courses at Utah Valley University. The new Business Building will provide the space needed to train future business leaders. Remodels and adjacent reassignments have not provided the amount of space needed for the program. Additionally, advancements in the teaching environment have created a space dilemma. Students and faculty have gained national recognition from efforts in sales, entrepreneurship, digital marketing and financial planning. To accommodate this growth and regional need for trained business professionals a new building is needed.

Southern Utah University Technology, Engineering, and Design Building

FY20 Request \$39,972,837

PROJECT OVERVIEW

The growing number of students at Southern Utah University combined with increased degree offerings in the areas of technology, engineering, and design is causing a shortage of academic space. Additionally, academic programs are split across multiple buildings on campus. This project achieves the University's mission to create efficiency in serving the diverse education needs of their students and to increase the number of engineers in Southern Utah, and nationally. The building will provide 95,000 square feet of modern, technologically advanced classroom space. The building is intended to meet current growth projections.

PROJECT OVERVIEW

This project uses a single space to provide certificate and two-year degree programs from Salt Lake Community College (SLCC) and seamless transfer into four-year programs at the University of Utah (U of U). This site will provide students with a full range of services that include admissions, advising, tutoring, digital learning and transfer support. Currently, students in Herriman seeking a college education commute to a SLCC location in Sandy or West Jordan, adding to their costs and time to complete their education. SLCC's partnership with the U of U will make certificate, associate, baccalaureate and master degrees even more attainable.

University of Utah Interdisciplinary Physical Science Building

FY20 Request \$60 Million

PROJECT OVERVIEW

This building will meet critical needs in science education and research in rapidly increasing areas of demand at the University of Utah. Enrollment in College of Science courses has increased by close to 30% during the past decade. This new project will provide space for current and future programs in the physical sciences and will support interdisciplinary projects and programs with Biology, Chemistry, Computer Science, Engineering, Geology, Mathematics, and the School of Medicine. Additionally, the proposed building would also support K-12 STEM education through science demonstration spaces, an astronomical and solar observatory, and a donor-funded planetarium.

PROJECT OVERVIEW

State Court is currently located in the Sanpete County Office Building, and the Juvenile Probation and Guardian Ad Litem (GAL) is located in the old Manti City Office Building. The current facilities cannot be secured because of multiple entrances and other building tenants. Additionally, the facilities are not in compliance with current building code, ADA, court operational, or security standards. This request will replace the two leased facilities that are not safe and cannot be remodeled. The proposed building will include a District Court courtroom, Juvenile Court courtroom, Juvenile Probation offices, and GAL offices to the residents of Sanpete County in a safe and modern court facility.

PROJECT OVERVIEW

The agency's collections are currently warehoused in the basement of the Rio Grande Depot and the Art Haus. The collection faces daily threats because of inadequate environmental controls and deteriorated building systems. The proposed Utah Artifacts & Art Center will include artifacts and art storage areas; collections workspaces for cleaning, accessioning, and processing objects as well as curating and staging exhibitions; and administration support spaces. Planned as a collections management center, not simply a warehousing storage facility, certain portions of the facility will be accessible to the public.

PROJECT OVERVIEW

The 75,000 square foot Health Sciences Building will be immediately adjacent to the Main Campus building and will house programs that train registered nurses through a partnership with Weber State University, medical assistants, pharmacy technicians, medical office personnel, dental assistants, and phlebotomists. Seventy-two percent of students on the college's waiting list are for spaces in health science related training programs with the primary limitation being physical facilities. The existing facilities are significantly undersized creating unreasonable wait times for prospective students.

PROJECT OVERVIEW

The new Social Science and General Education Building will upgrade the college's social science course delivery by providing new technologies, creating central locations for academic departments, and adding multi-use classroom facilities for general education courses. Social Science enrollments at Snow College grew by nearly 40% from 2006 to 2016. By 2026, enrollment is expected to reach 4,900, a 30% increase in students taking social science courses. Whether students are social science majors or taking a social science course to fulfill degree requirements, providing students with a state-of-the-art facility is a critical need.

PROJECT OVERVIEW

Therapy services offered at the Utah State Developmental Center are currently spread across a large portion of the campus. Many of these services are being performed in facilities that were built in the 1930's and have reached the end of their useful life. This facility would allow for therapy services to be consolidated in one primary location, which will allow for the most effective and efficient care prescribed and required for the individuals that reside at the center.

PROJECT OVERVIEW

The College of Humanities and Social Sciences (CHaSS) seeks to consolidate all CHaSS departments and programs into buildings in the vicinity of the Ray B. West Building and Old Main. Portions of the college's programs are currently fragmented in buildings across campus. The new building will be sited in the area between Ray B. West and Old Main. It will house units of the Department of Languages, Philosophy, and Communication Studies; units of the Department of Sociology, Social Work, and Anthropology; the Anthropology Museum; and the Utah Public Radio studios and offices.

FY20 LANDBANK REQUEST

PROJECT OVERVIEW

This project is an effort to acquire 15 acres of land at the old Geneva Steel site, which is now owned by Anderson Development. This location would become the future home of the Utah Fire and Rescue Academy (UFRA), which is currently located on a 10-acre lot at the Provo Airport. UFRA provides approximately 600 courses a year to firefighters all over the state. Due to the fact that Provo City has decided not to renew the lease of the property at the airport location, there is a need to relocate to a new site. There are efforts to collaborate with a variety of agencies that have expressed considerable interest in sharing the site including the Department of Public Safety's Driver's License Division, Division of Forestry, Fire and State Lands, U.S. Forest Service, Utah Valley University's Emergency Services Division. If these entities come together, it is anticipated that the future building could be designed and built to accommodate all parties.

PROJECT OVERVIEW

The lease for the existing downtown store, near Pioneer Park, will expire in 2022. The agency would like to relocate and expand the store for the downtown area to a two-level facility with increased parking. This relocation project will help the agency fulfill their statutory mission to reasonably meet the demands of the sale of alcohol in the State of Utah and will improve the customer shopping experience.

PROJECT OVERVIEW

The construction of this building is urgently needed to meet the increasing demand for on-campus student housing. For fall 2018, the Housing Office received 1,864 on-campus student-housing applications with only 662 beds available. Both on-campus and privately-owned student housing beds were nearly fully occupied for fall semester. In order to have sufficient beds available for fall 2021 and beyond, the university must act now to construct additional beds. The existing Shiloh Dormitory, which was constructed in 1962, will be demolished as part of this project.

PROJECT OVERVIEW

The IT department currently occupies space in three buildings across the Logan campus resulting in operational inefficiencies and utilizes valuable academic space. With the construction of this new facility, space in two of the facilities will be allocated to the academic units that have requested the space to accommodate significant growth in their programs. The space in the third building, the Quonset Hut, is planned for demolition contingent on a future state-funded academic building. The new IT facility consists of a new 23,500 square foot building that will be sited on the east side of campus near other service related departments.

Increased State O&M	\$0

PROJECT OVERVIEW

A new 401-bed suite-style housing facility will replace the existing Mountain View Tower built in 1966. This is a follow-on project to the new Central Suites housing facility that opened in fall 2018 which replaced the Valley View Tower, a twin to the Mountain View Tower. Due to its age, a complete building replacement is recommended as the current residence hall lacks modern fire-suppression and life-safety systems and will require significant investment to resolve aging infrastructure needs. The new Central Suites suite-style housing has been extremely well received by students and the housing facility was completely leased within its first academic year.

PROJECT OVERVIEW

A new parking structure is requested for the east side of the Logan campus adjacent to the Fine Arts facilities and on-campus housing. Over time, surface parking lots have given way to new facility construction and growing demands drive the need for the University to plan for and develop structured parking across the campus. This site was selected years ago as a prime location for a parking structure to serve students, faculty, staff, event patrons, and housing residents.

PROJECT OVERVIEW

Strong, sustained demand for Space Dynamics Lab applied research competencies is creating the need for an additional phase of construction to provide space for the engineers, scientists, and associated laboratories required to meet current demands. Until such a facility becomes available, the lab will continue to lease space on the Innovation Campus. However, there is simply no additional space to lease in existing buildings, which makes the construction of a new facility so important to the lab and the research mission of Utah State University.

PROJECT OVERVIEW

The Space Dynamics Lab is in need of additional high-bay laboratory spaces to assemble, test, and calibrate larger sensors, satellites, and other space-based projects. Existing high-bay spaces are beyond capacity and multiple projects are sharing the spaces to the best of their abilities. However, this creates a variety of constraints and is not optimal for meeting tight project deadlines. A vacant site located directly east of the Bennett Building and south of the Garn Building is the perfect location for the new high-bay laboratory as the other large assembly laboratories exist in these two buildings.

PROJECT OVERVIEW

The Utah Valley University Student Association has proposed a project to remodel and expand the Sorensen Student Center. The multi-year project will enhance the food court by adding 5,716 square feet, with much more seating for student dining. An additional 10,172 square feet of conference, office, and service spaces will also be added, totaling 15,888 additional square feet. Aging venues, such as the Ragan Theatre, will be updated, and the main concourse will be refreshed with new wall treatments, ceilings, and light fixtures. Entrances into the bookstore and meeting spaces will be enhanced to improve foot traffic and enrich the student experience.

PROJECT OVERVIEW

This project will construct an eight-story addition to the northwest of Phase III of the Huntsman Hospital complex. Four of these floors (comprising of approximately 102,000 square feet), will house the hospital and the following clinical programs: the Women's Center, expansion of Wellness and Integrative Health Center, 45-50 inpatient rooms, oncology faculty workspace, expanded space for clinical trials, and additional parking. This space is needed due to capacity constraints to inpatient services. Additionally, due to the limited availability of land for further growth, an additional four floors (comprising about 88,000 square feet) is planned for nonclinical operations, research, and future growth.

PROJECT OVERVIEW

A recently completed market survey and analysis demonstrated strong community support for an upgrade to the South End Zone. Competing with home television fans requires the fan experience at Rice Eccles Stadium to be upgraded and refreshed in order to meet the needs of our fans. The proposed South End Zone building will serve as a new, iconic University gateway, increase stadium capacity to over 50,000 and create new types of premium seating, improve overall fan amenities, and connect the east and west concourses. The vision for this project is to implement an end zone expansion that will enhance the current stadium to become comparable with the best Division 1 and PAC-12 facilities.

FIVE-YEAR PLAN

Projects listed from FY2020 through FY2024 were reviewed in detail by the Building Board and are listed in order of the Board's recommended priority. It is the Board's policy that the Five-Year Plan be a flexible document, meaning that each year agencies and institutions may submit new projects not listed in this plan for the Board's review. Due to various unknown factors, projects listed from FY2020 - FY 2024 may not be funded and future projects may supersede those currently listed.

The Board recognizes that the total funding needed for all prioritized projects in FY2020 is more than the amount that is likely to be available. Therefore, it is anticipated that some prioritized projects will not be funded in the year shown. Each year, the Board re-prioritizes all projects submitted for review. Consequently, some new projects not reviewed by the Board this year may move ahead of projects that were prioritized but not funded this year.

CAPITAL IMPROVEMENT PROJECTS

This section summarizes the total repairs to State-owned facilities (capital improvements) requested by State agencies and institutions of higher education. The pages that follow list the estimated costs associated with each of these critical repairs to buildings, steam tunnels, HVAC systems, electrical systems, roofs, and parking lots. Capital Improvement funds are used to maintain existing State-owned facilities.

Examples Include:

Repairing or replacing worn/dilapidated building components, systems and equipment; utility upgrades; correcting code violations; roofing and paving repairs; structural repairs; remodeling non-functional or inadequate space; site improvements; and hazardous material abatement.

Utah Code 63A-5-104 (4b) defines Capital Improvement as:

- (i) remodeling, alteration, replacement, or repair projects with a total cost of less than \$3.5 million;
- (ii) site and utility improvements with a total cost of less than \$3.5 million; or
- (iii) new facility (space) with a total construction cost of less than \$500,000.

Utah Code 63A-5-104 (4b) requires that certain projects are required to be identified if they meet the following criteria:

1. A single project that costs more than \$1,000,000;
2. Multiple projects within a single building or facility that collectively cost more than \$1,000,000;
3. A single project that will be constructed over multiple years with a yearly cost of \$1,000,000 or more and an aggregate cost of more than \$3,500,000;
4. Multiple projects within a single building or facility with a yearly cost of \$1,000,000 or more and an aggregate cost of more than \$3,500,000;
5. A single project previously reported to the Legislature as a capital improvement project under \$1,000,000 that, because of an increase in costs or scope of work, will now cost more than \$1,000,000;
6. Multiple projects within a single building or facility previously reported to the Legislature as a capital improvement project under \$1,000,000 that, because of an increase in costs or scope of work, will now cost more than \$1,000,000.

This report* fulfills the statutory requirement for the Building Board to submit a list of anticipated capital improvement requirements to the Legislature each year. Subsection 63A-5-104(4) also requires that “unless otherwise directed by the Legislature, the Building Board shall prioritize the capital improvements from the list submitted to the Legislature up to the level of appropriation made by the Legislature.

** The Building Board approves the final report in April, which may be different from what is contained in this publication.*

					Single project over \$ 1 million

DFCM LEASE REPORT

DFCM has prepared the following report of all space leased by the State of Utah, as required by Sections 63A-5-103 and 63A-5-303 of the Utah State Code. DFCM is responsible for managing 252 leases for State agencies statewide. Of those, 235 leases represent 1,263,034 square feet of space in buildings and 17 leases represent 194 acres of land. The DFCM Lease Portfolio comprises over \$20M in encumbered rents payable by State agencies. A summary of all leases by type of space is detailed in the FY 2019 Leasing Summary by Type of Space in the first section of the report. The DFCM leases administrative space for 30 State agencies housing 3,230 FTE's.

The Utah Administrative Office of the Courts is responsible for 33 leases which represents 264,733 square feet of office and courtroom space in buildings throughout the State. A summary of all leases for Court space is detailed in the FY 2019 Leasing Summary by Type of Space. DFCM does not manage leasing by the Utah Administrative Office of the Courts.

The Utah System of Higher Education reports the leasing activity for the universities and colleges. The Utah System of Higher Education reports universities and colleges leases of 2,493,890 square feet of space in buildings. A summary of the leases reported by the Utah System of Higher Education is in the FY 2019 Leasing Summary by Type of Space.

The Utah System of Technical Colleges reports the leasing activity for the technical colleges and campuses. The Utah System of Technical Colleges reports leasing 138,401 square feet of building space. A summary of the leases reported by the Utah System of Technical Colleges is in the FY 2019 Leasing Summary by Type of Space. DFCM does not manage leasing by the Utah System of Technical Colleges.

The second section of the report, FY 2020 Projections, details the projected increase in the amount of space required for each agency and the anticipated increase in annual rent of each agency by type of space. The increase in the amount of new space required is based on current projected growth during FY 2019. DFCM has not had the opportunity to evaluate each projection to verify the need for the increases. The actual additional space acquired will likely vary, and will be determined by Legislative approval of funding, Legislative approval of new employees and programs, and the budgetary constraints of the agencies.

DFCM negotiates new leases and lease renewals for the agencies as the budgets and programs are approved through the Legislative process. The projections in this report are the best estimates available and actual costs will vary based on negotiations on each lease. DFCM also works towards cost savings of leased space into less expensive State-owned space when possible.

CAPITAL FACILITIES FUNDING HISTORY

This summary includes appropriations of State funds and authorizations of debt that will be repaid with State funds. Non-State funds authorized for projects and debt authorizations are not included. For purposes of clarity, funding is shown in the year in which it was originally authorized notwithstanding actions in subsequent regular or special sessions to change funding source or year.

CONTINGENCY & PROJECT RESERVE

DFCM administers the Contingency Reserve and Project Reserve Funds as directed by section 63A-5-209. Together, these reserves comprise what was formerly known as the Statewide Contingency Fund which was created in 1983 to allow savings on one project to compensate for additional costs on another project. This provides centralized management and control over state funds budgeted for contingencies.

The amount budgeted is based on a sliding scale percentage of the construction budget which ranges from 4.5% to 9.5% based on the size and complexity of the project. The Contingency Reserve is used to fund all unforeseen project costs, except the award of construction bids that exceed the construction budget. The primary use of the Contingency Reserve is to fund construction change orders. Other uses include providing funds to cover actual costs which exceed amounts budgeted for design, testing services, soils investigations, surveys, construction insurance, etc.

The Project Reserve receives State funds resulting from construction bids coming in under the amount budgeted for construction. This fund also receives any residual funds left over in the project. This reserve may only be used to award construction bids that exceed the amount budgeted for construction. However, the Legislature retains the right to make appropriations from the fund for other building needs. The Building Board has adopted rules governing the use of the Contingency Reserve and the Project Reserve and all activities within these reserves are reported regularly to the Board.

FY18 RESERVE REPORT

CONTINGENCY RESERVE

FY 18 BEGINNING BALANCE		<u>\$ 8,443,702</u>
INCREASES:		
Budgeted Contingency Reserve	\$ 6,878,060	
Transfers Resulting from Decrease Change Orders/Modifications	-	
Transfers Contingency funds to Contingency Reserve	16,563	
<u>TOTAL INCREASES</u>		<u>6,894,623</u>
DECREASES:		
To Cover Unforeseen Project Costs New Construction	\$ 5,003,111	
To Cover Unforeseen Project Costs Remodeling	1,446,869	
Other Transfers	-	
<u>TOTAL DECREASES</u>		<u>6,449,980</u>
<u>CONTINGENCY RESERVE BALANCE AS OF JUNE 30, 2018</u>		<u><u>\$ 8,888,344</u></u>

PROJECT RESERVE

FY 18 BEGINNING BALANCE		<u>7,117,309</u>
INCREASES:		
Residual Balance to Close Project Budget Items	\$ 18,281,034	
Weber State Sale of Chiller 11077810	65,000	
FY'18 General Funds Appropriations	75,700	
<u>TOTAL INCREASES</u>		<u>18,421,734</u>
DECREASES:		
To Award of Construction Agreements	\$ 18,093,683	
Return To Project For Additional Expences	110,669	
017H008 DFCM Admin Reserve Share	204,700	
<u>TOTAL DECREASES</u>		<u>18,409,052</u>
<u>PROJECT RESERVE BALANCE AS OF JUNE 30, 2018</u>		<u><u>7,129,990</u></u>
